DOGS

Dogs were the first of all the **animals** to be domesticated. All dogs have the same wild **ancestor**, the wolf.

People began to **tame** dogs about 12,000 years ago **when** wolves probably came around

human settlements to scavenge from them. A hand-reared pup was a useful hunting aid because it could **run**

faster than people. It may have taken several thousand years to turn **wolves** into tame dogs. By 10,000

years ago dogs were playing an important part in **people's** lives. Now there are **more**

than 100 species of dogs. Dogs are colour-**blind** and they are also **short-sighted**. The dog **family**

also includes foxes, coyotes and jackals. African hunting dogs and **the** Australian dingo are true wild dogs.

They **have** lived in the wild for at least 8,000 years.
